Gentle, safe and effective

"The Antioxidant Company since 1990"

Some signs of anxiety or fear:

- Hiding
- Ears back
- Pacing
- Panting
- Crying or whining
- Shaking
- Tail tucking
- Yawning
- Lip licking

ProQuiet may be useful in the following situations:

- Thunderstorms
- Fireworks
- Travel / motion sickness
- Grooming
- Holiday company
- Behavior modification
- Vocalization at night
- Other episodic fears

Does my pet need to use ProQuiet on a daily basis for maximum effectiveness?

If you notice that your pet is experiencing stress when there is company over, while traveling or during thunderstorms / fireworks, your dog may only need to use ProQuiet on occasion, not on a daily basis. However, if you notice your pet experiences stress frequently, your veterinarian may recommend using ProQuiet on a daily basis.

For maximum effectiveness we recommend administering the appropriate amount of ProQuiet 30 - 45 minutes before a trigger. A trigger can be anything

from grabbing the car keys to the first clap of thunder, etc. Do not give the tablet(s) throughout the day. The recommended tablet usage is based on weight.

How does it work?

L-Tryptophan is an essential amino acid and natural relaxant. It is a precursor of serotonin and vitamin B3.

Taurine, an amino acid, is important for controlling the release of chemical signals between nerve cells in the brain. Supplementation can help minimize nervous behavior.

Vitamin B3, niacinamide, is vital for the nervous system and brain function.

Vitamin B6, pyridoxine HCl, is necessary for normal brain function and for making proteins, neurotransmitters and hormones.

Vitamin B12, cobalamin, is essential for the normal activity of nerve cells.

Tests have shown that **hops** have a truly relaxing effect, not just transitory muscle relaxation. Results may be seen within 20 - 40 minutes after taken orally.

Chamomile, an herb, has been shown to contain a mild relaxing agent, according to research.

Ginger Herb is shown to settle motion sickness, may counteract the fight or flight response and soothe upset stomachs associated with chemotherapy.

Brewer's Yeast is an excellent source of B vitamins and essential to nervous system health.

Research Policy

Animal Health Options' research policy is that all animal studies we fund are non-terminal and no animal is to be subjected to any procedure that would produce unnecessary pain. In university level research, we have paid for additional boarding costs once the studies were completed until all the animals were adopted out to new homes.
